PROFESSIONAL SUMMARY

Software Developer with 1+ year of production experience building scalable Python backend services, RESTful APIs, and data-driven applications. Proficient in FastAPI, Node.js, React, and cloud platforms (GCP, AWS). Experienced in designing modular system architectures, CI/CD pipelines, payment integrations, and ML-powered backend services. Passionate about writing clean, testable, and maintainable code.

EXPERIENCE

Software Engineer (Python Backend) | Mitt Arv Technologies, Hyderabad

Jul 2025 – Present

- Designed and deployed production-grade payment orchestration system in Python (FastAPI) with idempotent retry handling, webhook reconciliation, and failure-safe order state transitions, processing 5,000+ transactions/day
- Built ML-powered phishing risk scoring API using Python with real-time feature extraction and inference pipeline, serving 10,000+ daily URL safety analysis requests with <150ms response time
- Developed multimodal data processing pipelines for text and image intelligence using Python, MongoDB, and vector search, enabling semantic retrieval workflows across 1M+ documents
- Designed CI/CD-backed test architecture and automated deployment pipelines on GCP using GitHub Actions, reducing release cycle time by 40% and improving regression coverage

Software Engineer Intern (Python) | Mitt Arv Technologies, Hyderabad

Jan 2025 – Jun 2025

- Implemented secure authentication layer in Python reducing unauthorized access by 78% and increasing daily active users by 15%; built OTP-based phone verification module boosting user participation by 20%
- Refactored core backend workflows into modular, reusable Python components, reducing codebase complexity by 30%, improving maintainability and enabling faster feature development

PROJECTS

Payment & Webhook Orchestration System | Python, FastAPI, MongoDB, Redis, GitHub Actions2025

- Built robust REST API backend in Python (FastAPI) for end-to-end payment flow management with idempotency keys, async webhook event processing, and retry logic with exponential backoff
- Implemented Redis-based job queuing and caching layer reducing database load by 45%; deployed on AWS EC2 with automated CI/CD via GitHub Actions

AI-Powered Scam Detection API | Python, FastAPI, MongoDB Atlas, Sentence Transformers, Vector Search2024

- Built Python REST API backend using FastAPI for detecting scam messages from text, images, and files; implemented vector similarity search with sentence-transformer embeddings achieving 94% precision on 10,000+ cases
- Designed scalable MongoDB data model for structured and unstructured scam case storage; optimized query performance to achieve sub-200ms API response times

Smart Customer Feedback Analyser | Python, FastAPI, Scikit-learn, Pandas, Celery, SMTP2024

- Built Python data pipeline with Pandas for EDA across 50,000+ customer feedback entries; trained TF-IDF + Logistic Regression classifier achieving 89% sentiment prediction accuracy
- Deployed sentiment API via FastAPI with async Celery task queue and SMTP email alerts; Matplotlib dashboard insights used by product team to reduce churn by 12%

TECHNICAL SKILLS

Languages: Python (primary), JavaScript, TypeScript, C++, SQL

Backend Frameworks: FastAPI, Node.js, REST API Design, Celery, Async Programming, Microservices

Frontend: React, HTML, CSS, Streamlit

Databases: MongoDB, MySQL, Redis, MongoDB Atlas Vector Search

Cloud & DevOps: GCP, AWS (EC2, S3, RDS), Docker, GitHub Actions, CI/CD Pipelines, Git

Testing & Tools: Postman, Pytest, Unit Testing, VSCode, Cursor, Claude Code

ML & Data: Pandas, Scikit-learn, Matplotlib, Sentence Transformers, NumPy

EDUCATION

Malla Reddy Engineering College Hyderabad, Telangana

B.Tech in Computer Science (Data Science)

CGPA: 7.9/10 Nov 2022 – May 2025

Government Institute of Electronics Hyderabad, Telangana

Diploma in Instrumentation Engineering

CGPA: 9.29/10 Jun 2019 – May 2022

RELEVANT COURSEWORK

Data Structures & Algorithms, Object-Oriented Systems, Operating Systems, SDLC, Machine Learning, Natural Language Processing
